Position: Lead Electrical Technician

RND Automation, a rapidly expanding robotic automation, assembly & packaging equipment company is seeking a Lead Electrical Technician for Florida's largest industrial automatic, robotics, and packaging machinery manufacturer in Lakewood Ranch, Florida.

Job Description

The Lead Electrical Technician will be the electrical assembly technical lead for projects and may be responsible for some higher level project management activities. The individual will take on the responsibility for hands on wiring and assembly of custom automated, robotic and packaging equipment. While operating under minimal supervision in a manufacturing focused environment, this position will be involved in, but not limited to, electrical machine assembly, machine debug, and material handling. Electrical machine assembly includes the in-house panel build, electrical assembly, and the operation of the machine during and after debug, while at RND's facility. It is this positions responsibility to ensure that projects are completed satisfactorily, on time, and within labor budgets for assembly phase. To support the assembly phase, this position may also attend project design reviews and project huddles.

Duties and responsibilities

- Follow company values and always drive forward with the principles of RND's mission statement and goals.
- Be able to comprehend and follow the drawings in either the Project Assembly Book, or the Electrical Drawings Package.
- Assemble electrically, to the company assembly standards.
- Troubleshoot machines in regard to their electrical assemblies.
- Use experience to properly align and/or adjust assemblies to ensure they are square and in their proper location.
- Bring concerns or issues, with solutions if possible, back to the design team for evaluation.
- Assist with debug of machines utilizing proper flow guidelines (upstream stations before downstream stations, whenever possible).
- Operate machines, when needed, to assist in debug, customer training, and/or to gain time on a machine at the end of the debug process.
- Keep all work areas organized and free of clutter. This includes putting tools and assemblies away at the end of the day.
- Actively participate in project design reviews and project huddles.
- Act as the liaison between design staff and assembly to solve technical problems related to electrical design.
- Work with assembly team to ensure designs are being assembled as intended.
- Train Electrical Technicians.
- Maintain and help to set standards for assembly
- At times, be available for customer installs. This will require some travel.
